Policy on the modification of experimental equipment/set-up
and operating procedure previously approved by the CHBE Safety Committee

The experimental equipment and set-up need to be inspected and approved by the CHBE Safety Committee. Subsequently, if any modifications have been/are to be made that will affect its operation (such as installing new components and parts, re-piping, or adopting more stringent operating conditions), a re-inspection will be required, and they should not be implemented prior to final approval by the Safety Committee.

Recommended by Safety Committee:
